# JONATHAN BRENNER

Evansville, IN • jonathan-brenner.com

CompTIA Security+ and Network+ certified cybersecurity student and IT intern focused on offensive security. Completed a full penetration test with written report in Ethical Hacking coursework, and routinely test the attack surface of a self-built segmented lab monitored by Wazuh SIEM. Completing an AAS in Cyber Security/Information Assurance (3.5 GPA) at an NSA/DHS Center of Academic Excellence in May 2027; available full-time January 2027.

## TECHNICAL SKILLS

**Certifications:** CompTIA Security+ • CompTIA Network+
**Offensive & Testing:** Metasploit, Nmap (NSE), WPScan, John the Ripper, Hashcat, Hashtopolis, Wireshark, Kali Linux
**Defense & Monitoring:** Wazuh SIEM, OPNsense, Zabbix (SNMPv3), firewall policy, VLAN segmentation
**Identity & Access:** Active Directory, Microsoft Entra ID, MFA, Group Policy, Authentik SSO (LDAP)
**Networking:** TCP/IP, UDP, DHCP, DNS, SNMP, HAProxy reverse proxy, WireGuard VPN, Cloudflare, SSL/TLS
**Systems & Virtualization:** Windows 10/11, Linux (Ubuntu, Debian, Kali, Mint), Proxmox VE, Docker, Oracle VirtualBox, AWS EC2
**Scripting:** Python, Bash, HTML/CSS/JavaScript

## OFFENSIVE SECURITY PROJECTS

**Penetration Test & Report — Ethical Hacking Final** Ivy Tech Community College
*Authorized lab target | Coursework*

- Exploited a backdoored ProFTPD service with Metasploit to gain access to the target system
- Extracted the shadow file and cracked the recovered password hashes with John the Ripper; scanned the target web application with WPScan
- Documented methodology, findings, and remediation in a structured penetration test report

**Home Lab — Attack Surface Testing & Hardening** June 2022 – Present
*Personal Infrastructure Project | Self-Directed / Remote*

- Compare internal and external attack surface using Nmap NSE scripts and Wireshark packet capture to validate firewall rules and find exposed services; track CVEs affecting the lab stack to prioritize patching
- Run distributed password cracking with Hashtopolis and cloud GPU workers to study password storage weaknesses
- Segmented the network on OPNsense into Trusted, Servers, and IoT VLANs with default-deny rules, plus logged “tripwire” rules on the IoT VLAN that flag a likely compromise
- Migrated five services (Proxmox, OPNsense, Wazuh, Zabbix, Jellyfin) from LLDAP to Authentik SSO and built a three-tier group model for role-based access
- Deployed Wazuh SIEM on Proxmox with agents on Windows, BSD, and Linux hosts, NAS syslog forwarding, and email alerting
- Traced a recurring Proxmox outage to a network driver hang, tuned the driver, and added a systemd watchdog script that recovers the node automatically

## EXPERIENCE

**IT Intern** August 2026 – December 2026
*Easterseals Rehabilitation Center— Evansville, IN*

- Maintain HIPAA security controls on endpoints: BitLocker full-disk encryption, MFA re-enrollment, screen-lockout settings, and removal of unauthorized software through ConnectWise
- Create and manage user accounts in Active Directory and Microsoft Entra ID, and resolve Tier 1 tickets in Spiceworks across 11 facilities
- Reviewed updated cybersecurity guidelines for alignment with Easterseals National standards and assisted with immutable backup processes
- Identified a bug in the ticketing platform, gathered diagnostics, and worked directly with the vendor to resolve it; write knowledge base articles for recurring fixes

**Optical Lab Technician** May 2022 – Present
*Armada Optical — Evansville, IN*

- Diagnose and repair legacy manufacturing equipment (30+ years old) without vendor documentation, using systematic root-cause analysis on mechanical and electrical faults
- Manage monthly supply ordering for the full lab and balance production and maintenance priorities independently

## EDUCATION

**AAS in Cyber Security / Information Assurance — Ivy Tech Community College** Expected May 2027
*Evansville, IN | GPA: 3.5 | Dean’s List (multiple semesters) | NSA/DHS Center of Academic Excellence (CAE-CD)*

- Research paper on virtual machine escape vulnerabilities (CVE-2025-22225, CVE-2024-6222, CVE-2025-40300)
- Completed: Network Protocol Analysis, Linux & Virtualization, Enterprise Computing, Cloud Foundations, Business Continuity, Ethical Hacking, Digital Forensics, IT Project Management
- Built a Windows Server 2022 Active Directory domain on AWS EC2 (VPC, domain controller, users, groups, and Group Policy)
- Remaining: Cyber Operations (Spring 2027, online) • Technical Certificate in Cyber Security/Information Assurance already awarded
